“RFID: Tiny Wonders
Behind Friction-Free
Grocery Shopping”

How cool would it be if you could get what you need from the local grocery store and just leave? No dealing with cashiers. No fuss.

Amazon.com has been fiddling with the idea since 2015. Now, it's ready to open a grocery store in Seattle that promises the convenience of online shopping, in the real world.

Customers will enter Go Grocery, scan a QR code that connects to their Amazon account, pick up the items needed, then leave. That's it. All payment details and product tracking are handled in the background by cloud-based payment infrastructure and cameras. Lots of cameras.

The image shows the interior of an Amazon Go store. In the foreground, there are several self-checkout stations with grey frames and red and green light bars. The background is filled with tall, dark metal shelving units stocked with various grocery items. Signs above the shelves indicate sections like 'COLD DRINKS', 'DELI', and 'YOGURT'. The ceiling is dark with recessed linear lighting fixtures. On the left, a sign on the wall reads 'JUST WALK OUT SHOPPING'. A large black text box with a white torn-edge border is overlaid on the left side of the image.

There are 27 Amazon Go retail stores in the United States as of September 09, 2022.

16 And he causeth all, both small and great, rich and poor, free and bond, to receive a mark in their right hand, or in their foreheads:

And that no man might buy or sell, save he that had the mark, or the name of the beast, or the number of his name.

Rev. 13:16-17
